

Deployment Guidelines

Page 1

This document describes the deployment process for production systems.

Prerequisites:

- Access to production environment
- Valid credentials
- Approved change request

Steps:

1. Review change request
2. Backup current state
3. Deploy changes
4. Verify deployment
5. Update documentation

Deployment Guidelines

Page 2

Deployment Checklist:

Pre-deployment:

- Code review completed
- Tests passing
- Security scan completed
- Database migrations prepared

Deployment:

- Take snapshot
- Stop services
- Apply updates
- Restart services
- Verify health

Post-deployment:

- Monitor logs
- Check metrics
- Notify stakeholders

Deployment Guidelines

Page 3

Rollback Procedure:

If deployment fails:

1. Stop affected services
2. Restore from snapshot
3. Restart services
4. Verify system health
5. Investigate failure
6. Document lessons learned
